REVELATION LED

with MesoOptics®

The Omega Revelation LED downlight represents a milestone in the design of architectural quality solid state lighting. The luminaire features a two-piece optical system which incorporates Mesoptics between the upper and lower reflectors, thus providing for visually stunning appearance. In fact, no other LED

downlight offers such a deeply regressed LED light

engine to precisely control cutoff and glare. The luminaire completely eliminates direct visibility of the LED array, as well as hot spots and striations often seen with such products. The innovative design gives architects and lighting designers the ultimate in control, quality, and performance in a truly sustainable lighting solution. Available in 4" and 6" apertures @ 3000K. The 6" aperture offers three distributions.

LUMEC

LEONIS, by Lumec, is the culmination of years of effort by design professionals dedicated to improving the outdoor lighting environment so that the future will not only be ecologically sound but aesthetically pleasing. Leonis is Dark Sky compliant with

cut-off optics. It creates no night-time light pollution and is available with HID optics or an LED lightengine. With it's interchangeable optical system, your projects will benefit from an estimated 30% reduction in power consumption when using the LifeLED The LED version offers type II, III, IV and V optical systems.

capri LIGHTING

Capri Lighting's Firedome NXT is the

next generation fire-rated downlight housing. Utilizing a revolutionary sustainable wool membrane, the industry's most innovative fire-

rated housing is tested to stringent fire-rated standards and approved by UL The Capri

Firedome NXT is tested and approved for one-hour UL L500 floor and ceiling designs. Taking safety to the next level, it also utilizes Airseal technology to minimize the migration of toxic fume into other areas. The Firedome NXT is available in 6" incandescent and fluorescent and 4" incandescent and low voltage. With Firedome NXT, there are no more costly, non-UL recognized custom sheetrock enclosures or limitations to surface-mounted fixtures when adhering to fire-related building codes.
